

4-D Ultrasounds

To our OB Patients:

Congratulations on this exciting time in your life. We have the “4-D” ultrasound capability on our ultrasound machine. If you are interested in obtaining this type of picture of your baby, **please talk with your physician or one of the Nurse Practitioners after your 20 week routine screening ultrasound has been done to have this scheduled.**

This ultrasound will **NOT** be part of your regular ob care and will **NOT** be done for measurements of the baby or for any other diagnostic purposes. It will be for pictures for **personal use only** and will be done between **28 weeks and 30 weeks**. There will be a charge of \$60 for this service to be paid in cash on the day of the service. Be sure to bring a VHS tape with you to your appointment.

We will do our best to provide you with “4D” pictures of your baby, but please be aware that some conditions will affect the quality of your pictures. These conditions include but are not limited to 1) the position of the placenta 2) the size of the patient and 3) the amount of amniotic fluid surrounding the baby’s face. There will be an additional charge of \$60 if you request another ultrasound of this type for additional pictures. Thank you for your understanding on this issue and thank you for allowing us to be your healthcare provider during this exciting time.
